

FRACTIONS

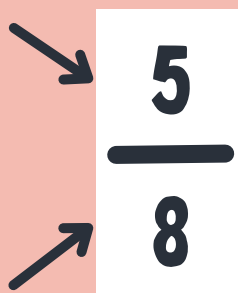

$$\frac{5}{8}$$

WHAT IS A FRACTION?

It is a number that is expressed equal parts of a whole object or a set of objects.

VOCABULARY:

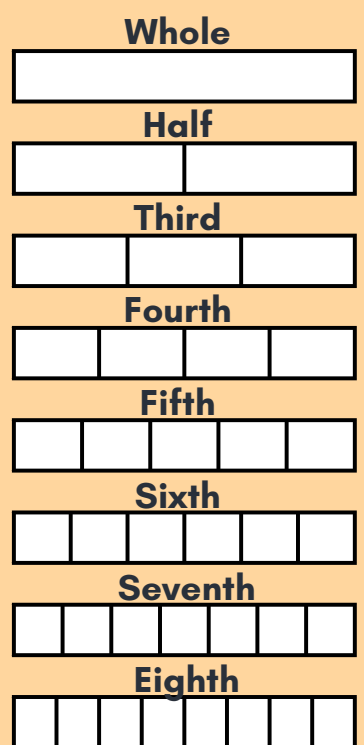

Numerator: shows how many parts of the whole/set.

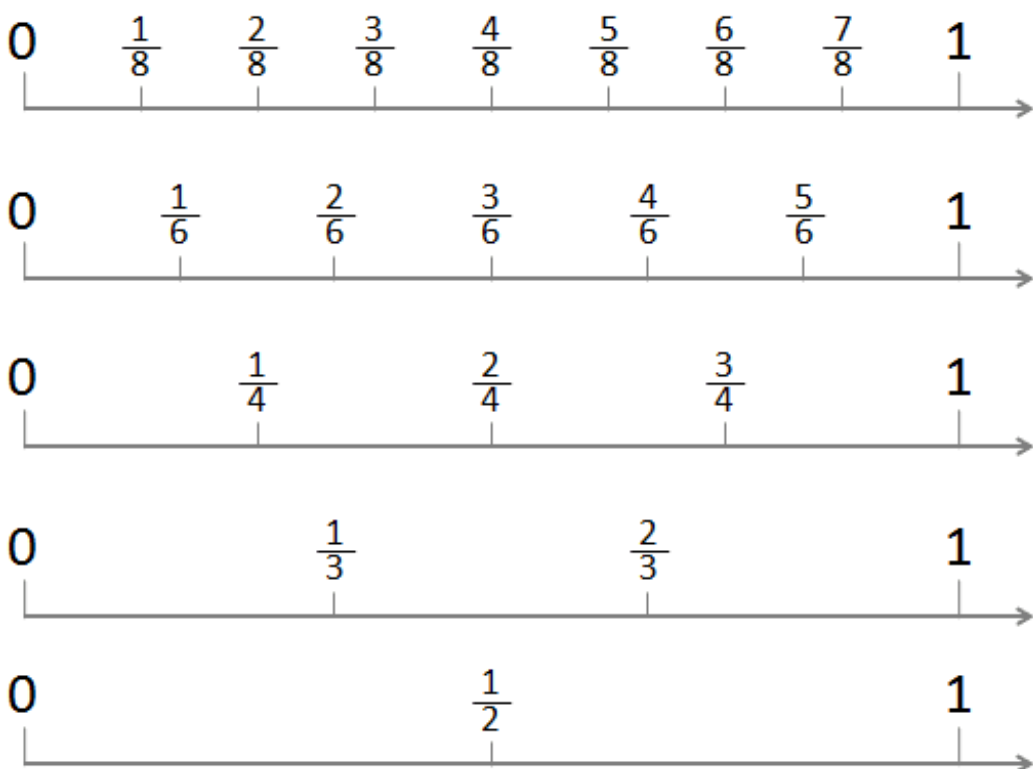

$$\frac{5}{8}$$

Denominator: shows the number of equal parts an item is divided into/ number in the set.

KEYWORDS:

NUMBER LINE

TYPES OF FRACTIONS

$\frac{2}{4}$ Proper Fraction
- the numerator is smaller than the denominator

$\frac{9}{5}$ Improper Fraction
- the numerator is equal or greater than the denominator

$1\frac{1}{2}$ Mixed Number
- consists of a whole number and a proper fraction

Adding & Subtracting FRACTIONS

1. Find a common denominator

Finding the least common multiple, will give you the least common denominator.

$$\frac{2}{5} + \frac{1}{4} \quad \begin{array}{l} 4: 4 \ 8 \ 12 \ 16 \ 20 \\ 5: 5 \ 10 \ 15 \ 20 \end{array}$$

2. Make equivalent fractions

Use the common denominator to create equivalent fractions.

$$\frac{2}{5} \times \frac{4}{4} = \frac{8}{20} + \frac{1}{4} \times \frac{5}{5} = \frac{5}{20}$$

3. Add or subtract numerators

Now that the denominators are the same you can add or subtract the numerators.

$$\frac{8}{20} + \frac{5}{20} = \frac{13}{20}$$

4. Simplify the answer

Simplify the fraction to lowest terms and change any improper fractions to mixed numbers.

$$\frac{13}{20} \text{ Already is in lowest terms.}$$
