

Playing with Constructions: A Guide to Geometric Drawing

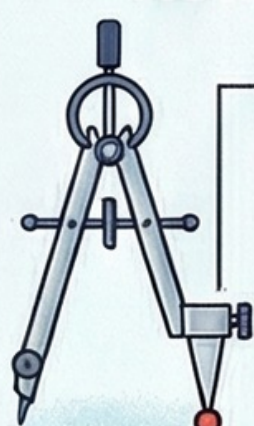

Mastering Your Tools: The Compass

What is a Compass?

A tool used to draw perfect circles and arcs accurately.

How to Draw a Circle

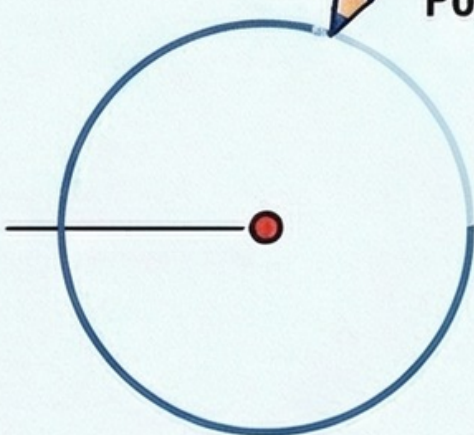

Fixed Metal Point

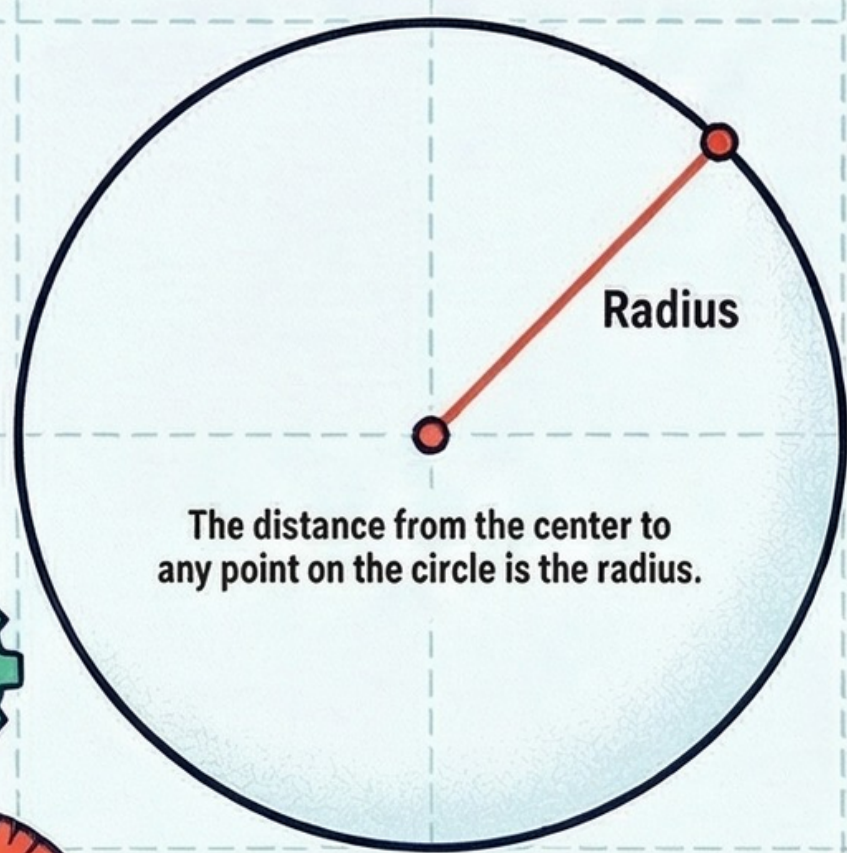

The fixed metal point creates the center.

Pencil Point

The pencil draws the circle.

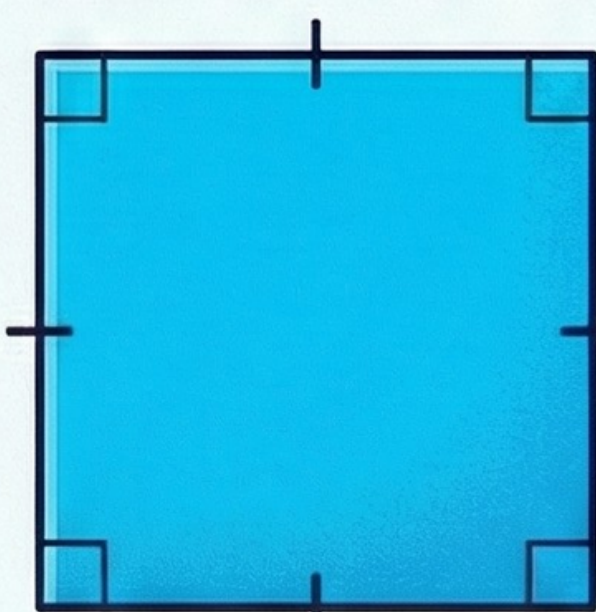

The Radius is Key

The distance from the center to any point on the circle is the radius.

Constructing Shapes

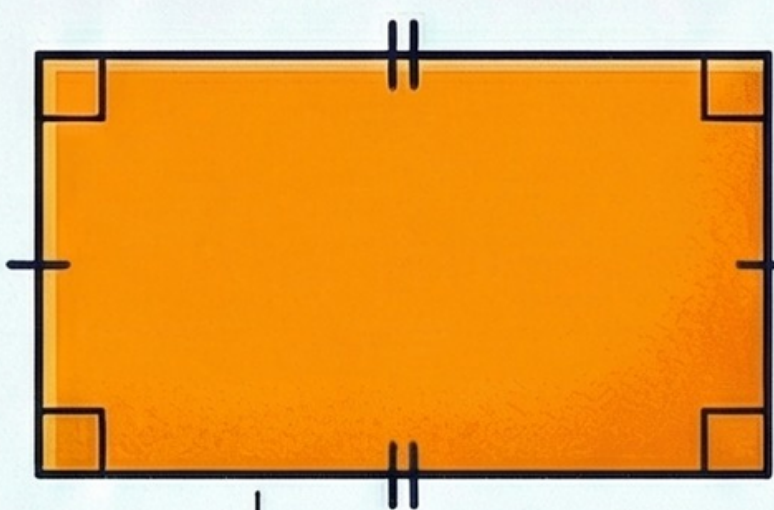

Properties of a Square

All four sides are equal length

All four angles are 90 degrees

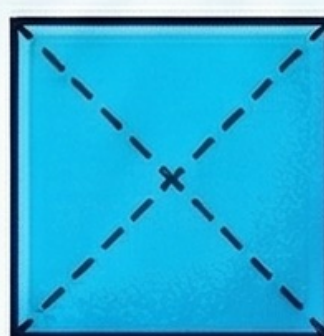

Properties of a Rectangle

Opposite sides are equal length

All four angles are 90 degrees

Diagonals Connect Corners

A diagonal is a straight line that connects two opposite corners of a shape.

A diagonal is a straight line that connects two opposite corners of a shape.
