CHAPTER-12-QUESTIONS-CLASS7TH-MATHS

Class 07 - Maths (Ganita Prakash)

Section A

1. A small box weighs 0.36 kg. If 0.45 such boxes are used for packing, what is the combined weight? **[1]**

   a) 0.0162 kg
   b) 0.036 kg
   c) 1.62 kg
   d) 0.162 kg

2. What happens to a number when it is divided by 1000? **[1]**

   a) Decimal moves 2 places left
   b) Decimal moves 3 places left
   c) Decimal moves 3 places right
   d) Decimal moves 1 place right

3. When dividing by a decimal number less than 1, the quotient is: **[1]**

   a) Equal to dividend
   b) Zero
   c) Greater than dividend
   d) Smaller than dividend

4. When is the product of two decimals less than both numbers? **[1]**

   a) One > 1, one < 1
   b) Both > 1
   c) Both < 1
   d) One is zero

5. Why do we add a leap day every 4 years? **[1]**

   a) Earth takes more than 365 days
   b) Earth rotates faster
   c) Months are uneven
   d) Sun moves closer

6. How many decimal places will the product of 2.34 × 0.5 have? **[1]**

   a) 1
   b) 4
   c) 2
   d) 3

7. Dividing a decimal number by 10 results in: **[1]**

   a) Number doubles
   b) No change
   c) Decimal moves left by 1 place
   d) Decimal moves right

8. The value of 3.6 ÷ 0.6 is: **[1]**

   a) 6
   b) 0.06
   c) 60
   d) 0.6

9. Which fraction is equal to 0.072? **[1]**

   a) $\frac{72}{1000}$
   b) $\frac{9}{124}$
   c) $\frac{72}{100}$
   d) $\frac{18}{251}$

10. The value of 0.6 × 0.4 is: **[1]**

a) 0.24 b) 24

c) 2.4 d) 0.024

11. Which product is greater than 10? **[1]**

a) 0.5 × 20 b) 1.2 × 9

c) 0.8 × 12 d) 0.6 × 15

12. The decimal equivalent of 847/10000 is: **[1]**

a) 0.0847 b) 8.47

c) 0.847 d) 84.7

13. What is the quotient of 0.045 ÷ 5? **[1]**

a) 0.09 b) 0.9

c) 0.0009 d) 0.009

14. If leap year rules were ignored, what would happen over time? **[1]**

a) Years would shorten b) Days would increase

c) Months would change d) Seasons would shift

15. How many leap years are there in 400 years? **[1]**

a) 97 b) 96

c) 100 d) 400

16. Which of the following is the smallest number? **[1]**

a) 0.49 b) 0.5

c) 0.45 d) 0.405

17. If 125 × 16 = 2000, then 1.25 × 0.16 equals: **[1]**

a) 0.02 b) 0.2

c) 20 d) 2

18. Which of the following gives a terminating decimal? **[1]**

a) 2 ÷ 7 b) 5 ÷ 8

c) 4 ÷ 9 d) 1 ÷ 3

19. The main reason for adjusting leap years is to: **[1]**

a) Match seasons b) Change months

c) Reduce holidays d) Adjust time zones

20. **Assertion (A):** The product of 2.5 and 0.4 is 1.0. **[1]**

Reason (R): Multiplying a number by a decimal less than 1 reduces its value.

a) Both A and R are true and R is the correct explanation of A.

b) Both A and R are true but R is not the correct explanation of A.

c) A is true but R is false.

d) A is false but R is true.

21. **Assertion (A):** While dividing 4.2 by 0.7, both numbers can be multiplied by 10. **[1]**
Reason (R): Multiplying both dividend and divisor by the same number does not change the quotient.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

22. **Assertion (A):** Multiply $0.75 \times 3.12 = 2.34$. **[1]**
Reason (R): Multiply 75 and 312, then place the decimal four digits from the left.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

23. **Assertion (A):** $0.42 \div 0.7 = 0.6$. **[1]**
Reason (R): Dividing a smaller decimal by a larger decimal always gives a number less than 1.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

24. **Assertion (A):** The product of two decimal numbers less than 1 is always less than 1. **[1]**
Reason (R): Multiplication always increases the value of numbers.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

25. **Assertion (A):** Dividing a number by 0.1 makes the quotient smaller than the dividend. **[1]**
Reason (R): Dividing by a number less than 1 increases the quotient.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

26. **Assertion (A):** $15.36 + 0.06 = 256$ **[1]**
Reason (R): Multiplying both dividend and divisor by 100 makes division easier.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

27. **Assertion (A):** The quotient of dividing a decimal by another decimal greater than 1 is less than the dividend. **[1]**
Reason (R): To divide decimals, we convert the divisor into a whole number

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

28. **Assertion (A):** Dividing a number by 1000 moves the decimal point three places to the left. **[1]**

Reason (R): 1000 is equal to 10^3.

a) Both A and R are true and R is the correct explanation of A.

b) Both A and R are true but R is not the correct explanation of A.

c) A is true but R is false.

d) A is false but R is true.

29. **Assertion (A):** The quotient obtained by dividing 6.72 by 1.6 is 4.2 **[1]**

Reason (R): The product of 1.6 and 4.2 is 6.72

a) Both A and R are true and R is the correct explanation of A.

b) Both A and R are true but R is not the correct explanation of A.

c) A is true but R is false.

d) A is false but R is true.

30. Write the decimal form of $\frac{45}{1000}$ **[1]**

31. Find the product of 0.04 and 0.3. **[1]**

32. Is the year 2000 a leap year? Give reason numerically. **[1]**

33. Find: $3.6 \div 0.6$ **[1]**

34. Divide 7.2 by 4. **[1]**

35. Find: $0.84 \div 0.7$ **[1]**

36. Convert 0.09 into a fraction in lowest form. **[1]**

Section B

37. **Match the following:** **[2]**

Column A Column B	Column B
(a) 14.25×6.5	(i) 76.82
(b) $25.78 \div 5.4$	(ii) 92.625
(c) $7.68 \div 2.4$	(iii) 4.777
(d) 8.35×9.2	(iv) 3.2

38. A tailor has 20.1 m of cloth. He uses 1.35 m for each shirt and 0.95 m for each trouser. He makes 9 shirts and 7 trousers. How much cloth is left? **[2]**

39. A water tank contains 63.6 L. Water is emptied at 2L/h. How long to empty? **[2]**

40. Arrange the following decimals in ascending order: **[2]**

a. 2.35, 2.305, 2.5, 2.050

b. 0.49, 0.409, 0.9, 0.094

41. A caterer pours 14 litres of juice equally into 98 cups. How much juice is in each cup (in millilitres)? **[2]**

42. The thickness of a coin is 1.38 mm. If 40 coins are stacked, what is the height of the stack in cm? **[2]**

43. Write the short form of: **[2]**

i. $70 + \frac{5}{10} + \frac{3}{1000}$

ii. $400 + 5 + \frac{7}{100} + \frac{8}{1000}$

44. The distance between Delhi and Bareilly is 278.4 km. A train covers this distance in 6 hours. How much distance did the train cover in 1 hour? **[2]**

45. A car travels 92.4 km in 1.2 h. Find its speed. **[2]**

46. Neha purchased 12 metres of cloth. She used 7.75 metres of it for curtains and 2.35 metres for a **[2]**

bed-sheet. How much cloth is left?

47. The cost of one metre of cloth is Rs. 62.85. Find the cost of 43 m of cloth. **[2]**

Section C

48. Write the following decimals in the place-value chart: **[3]**

a. 4.6

b. 12.08

c. 425.763

49. Compare the following decimals: 2.147 and 2.18 **[3]**

50. Using decimals, convert as directed: **[3]**

a. 5 cm 8 mm into cm

b. 12 m 72 cm into m

c. 6 kg 91 g into kg

51. Price of 1 kg apples is ₹ 63.50. Find the price of 2.45 kg of apples. Can we write 2.45 as 2.450 and 63.50 as 63.5? **[3]**

52. The following problem was set by Sridharacharya in his book, Patiganita. " $6\frac{1}{4}$ is divided by $2\frac{1}{2}$, and $60\frac{1}{4}$ is divided by $3\frac{1}{2}$. Tell the quotients separately." Can you try to solve it by converting the fractions into decimals? **[3]**

53. Convert the following decimals into fractions. **[3]**

a. 3.9

b. 5.67

c. 0.287

54. Write the expanded form and short form of the following decimals: **[3]**

a. 12.507

b. 0.436

c. 89.04

55. The price of 1 kg of oranges is ₹ 56.50. What is the price of 2.250 kg of oranges? Can we write 56.50 as 56.5 and 2.250 as 2.25 and multiply? Will we get the same product? Why? **[3]**

56. Add: 18.437, 125.07 and 36.8 **[3]**

Converting the given decimals into like decimals,

57. Multiply: **[3]**

a. 423.74 by 10

b. 1,103.07 by 100

c. 123.628 by 1,000

Section D

58. **Read the following text carefully and answer the questions that follow:** **[4]**

A tailor needs 2.45 m of cloth to stitch one school uniform. A school places an order for 8 uniforms. After stitching, the tailor distributes the total cloth length equally into 4 bundles for storage. This situation helps in understanding multiplication and division of decimals used in tailoring and measurement.

Questions:

a. How much cloth is required to stitch 8 uniforms? **(1)**

b. Write 2.45 m as a fraction. **(1)**

c. Find the length of cloth in each bundle if the total cloth is divided equally into 4 bundles. **(2)**

OR

If the tailor had 20 m of cloth, how much cloth would be left unused after stitching 8 uniforms? **(2)**

59. **Read the following text carefully and answer the questions that follow:** **[4]**

Aman buys 3.2 notebooks at ₹ 18.75 each and 1.5 packs of pens at ₹ 42.4 per pack. The shopkeeper calculates the bill using decimal multiplication. Aman verifies the bill at home and estimates the amount by rounding off the prices.

Questions:

a. Find the cost of notebooks. **(1)**

b. Find the cost of pen packs. **(1)**

c. Find the total cost of stationery. **(2)**

OR

Estimate the total bill by rounding prices to the nearest whole number. **(2)**

60. **Read the following text carefully and answer the questions that follow:** **[4]**

Aman goes to a stationery shop to buy notebooks and pen packs for school. He buys 3.2 notebooks at ₹ 18.75 per notebook and 1.5 packs of pens at ₹ 42.4 per pack.

The shopkeeper prepares the bill using decimal multiplication. Aman checks the calculations at home and estimates the total amount to verify the bill. This activity helps Aman practise multiplication of decimals and understand estimation in daily life.

Questions:

a. Find the cost of 3.2 notebooks. **(1)**

b. Find the cost of 1.5 packs of pens. **(1)**

c. Find the total cost of the stationery items. **(2)**

OR

Estimate the total bill by rounding off the prices to the nearest whole number. **(2)**

Section E

61. Using examples, analyse the following three cases in depth: **[5]**

i. Product of two decimals is greater than both.

ii. Product of two decimals is less than both.

iii. Product lies between the two numbers.

Explain mathematically why each happens using place value reasoning.

62. A decimal number has three digits after the decimal point. After multiplying by 1000, the number becomes a whole number. After dividing that whole number by 8, the result is still a whole number. What does this tell you about the original decimal number? **[5]**

63. Write the number names of the following decimals: **[5]**

a. 0.08

b. 35.28

c. 218.035

d. 0.0053

e. 8.52

64. A teacher writes two decimals on the board: 0.48 and 0.4800. **[5]**
A student says the second number is larger because "it has more digits." Is the student correct? Explain using place-value reasoning.

65. Write the place value of each digit of 745.238. Also, write 745.238 in the expanded form. **[5]**

66. Sort the following expressions in increasing order: **[5]**

a. 245.05×0.942368
b. 245.05×7.9682
c. $245.05 \div 7.9682$
d. $245.05 \div 0.942368$
e. 245.05
f. 7.9682

67. A student claims: "Dividing any decimal by 10 will always make the number exactly one-tenth of the original." Is the statement always true? Use examples to justify your answer. **[5]**

68. Two numbers have a product of 0.045. One number is 0.5. Without dividing, predict whether the other number is greater or smaller than 0.045. Explain. **[5]**

69. A number becomes 100 times larger when its decimal point is moved two places to the right. However, when the same number is multiplied by a decimal, the result becomes smaller than the original number. Explain how both can happen using an example. **[5]**

Section F

70. **Fill in the blanks:** **[6]**

(a) Dividing a number by 100 moves the decimal point _____ places to the left. **[1]**
(b) A rope 19.8 m long is cut into pieces each 0.33 m long. Number of full pieces = _____. **[1]**
(c) 36 ÷ _____ = 360 **[1]**
(d) When dividing by a decimal, both dividend and divisor are multiplied by the same power of _____. **[1]**
(e) A year divisible by _____ is a leap year only if it is also divisible by 400. **[1]**
(f) To multiply two decimals, first multiply them as _____ numbers. **[1]**
