TRIAL PAPER SCIENCE CHAPTER-3

Class 08 - Science (Curiosity)

Section A

1. **State whether the given statement is True or False:** **[10]**
   (a) All diseases are caused by infections. **[1]**
   (b) A healthy person maintains a positive mindset and enjoys social life. **[1]**
   (c) Antibiotics are effective against viral infections like the flu. **[1]**
   (d) Vaccines can treat illnesses after someone is already sick. **[1]**
   (e) The concept of health in Ayurveda includes balancing body, mind, and surroundings. **[1]**
   (f) Malaria is a disease caused by a virus. **[1]**
   (g) Typhoid is spread through contaminated water. **[1]**
   (h) Physical activity should be avoided to focus more on academic studies. **[1]**
   (i) Stress can negatively affect both mental and physical health. **[1]**
   (j) India is one of the world's largest producers of vaccines. **[1]**
2. **Fill in the blanks:** **[10]**
   (a) Building and using toilets helps prevent diseases spread through contaminated _____. **[1]**
   (b) The natural ability of our body to fight diseases is known as _____. **[1]**
   (c) Antibiotics are effective against _____ infections but not viral ones. **[1]**
   (d) _____ is a non-communicable disease caused by a lack of specific nutrients in the diet. **[1]**
   (e) Vaccines provide _____ immunity by training the immune system. **[1]**
   (f) Headache is a _____ experienced by the patient. **[1]**
   (g) A _____ helps our body fight certain diseases by training the immune system. **[1]**
   (h) Medicines that kill the bacteria causing diseases are known as _____. **[1]**
   (i) Practising _____, like deep breathing, supports mental health in Ayurveda. **[1]**
   (j) In Ayurveda, the concept of _____ is important for balancing body, mind, and surroundings. **[1]**

Section B

3. What is a disease? **[1]**
   a) A habit affecting daily activities
   b) A treatment improving body function
   c) A condition affecting normal body function
   d) A nutrient supporting body growth
4. How do communicable diseases spread from one person to another? **[1]**
   a) Through sunlight
   b) By reading an infected person's book
   c) By talking to an infected person
   d) Through direct contact like shaking hands
5. Why should one say 'NO' to harmful substances for maintaining health? **[1]**

a) To reduce the risk of health issues related to substance abuse
b) To ensure a sedentary lifestyle
c) To enjoy all activities without any restrictions
d) To prevent consumption of fruits and vegetables

6. Why are vaccines considered preventive rather than curative? **[1]**

a) They protect before serious disease develops
b) They remove every harmful germ
c) They treat illness after symptoms appear
d) They replace medicines during treatment

7. Why might antibiotics fail against some bacteria? **[1]**

a) Multilingual instructions confuse usage
b) Bacteria sometimes develop antibiotic resistance
c) They were developed too long ago
d) They target human cells mistakenly

8. How does a sign differ from a symptom of a disease? **[1]**

a) A symptom is always visible
b) A symptom can be measured
c) A sign is always felt
d) A sign can be measured

9. Arun finds breathing difficult in a place filled with smoke and dust. Which factor is most directly affecting his health? **[1]**

a) Insufficient family time
b) Poor air quality
c) Excessive sleep duration
d) Lack of exercise

10. Which symptom is commonly associated with dengue fever? **[1]**

a) Night sweats and fatigue
b) Muscle and joint pain
c) Itchy skin and blisters
d) Jaundice and vomiting

11. How does a vaccine help the immune system protect the body? **[1]**

a) It replaces the body's immune system
b) It directly cures every infection
c) It prevents the body from forming immunity
d) It trains the immune system to recognise harmful germs

12. What immediate action should be taken when diagnosed with an infectious bacterial disease? **[1]**

a) Stop all physical activities
b) Discontinue eating solid foods
c) Consume excessive amounts of water
d) Begin a course of antibiotics as prescribed

13. What is the main cause of antibiotic resistance? **[1]**

a) Overuse of vaccines
b) Poor diet
c) Antibiotic overuse
d) Lack of exercise

14. Which of the following diseases can be prevented through vaccination? **[1]**

a) Loneliness
b) Diarrhoea

c) Polio
d) Asthma

15. Which insect acts as a vector for certain diseases? **[1]**

a) Mosquito
b) Honeybee
c) Butterfly
d) Grasshopper

16. Which habit helps maintain personal hygiene? **[1]**

a) Keeping yourself clean
b) Skipping your breakfast
c) Using screens for long
d) Eating junk food daily

17. In which year was penicillin discovered? **[1]**

a) 1960
b) 1945
c) 1928
d) 1796

18. Which of the following is a non-communicable disease? **[1]**

a) Diabetes
b) Typhoid
c) Chickenpox
d) Influenza

19. If someone spends a lot of time in polluted areas, what health issue might they face? **[1]**

a) Development of respiratory issues
b) Improved lung capacity
c) Enhanced immune function
d) Better heart health

20. Which lifestyle change is suggested for preventing obesity? **[1]**

a) Balanced diet and regular exercise
b) Processed food and inactivity
c) Long screen time and inactivity
d) Late sleeping and overeating

21. What is one of the key components of staying healthy? **[1]**

a) Ignoring a balanced diet
b) Spending more time on screens
c) Getting enough sleep
d) Eating junk food

22. Which disease is caused by protozoa? **[1]**

a) Chickenpox
b) Cholera
c) Malaria
d) Dengue fever

Section C

23. **Assertion (A):** Antibiotics should be used only when prescribed by a doctor. **[1]**
Reason (R): Overuse of antibiotics can lead to antibiotic resistance.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

24. **Assertion (A):** Emotions like stress can lead to health issues. **[1]**
Reason (R): A healthy person can efficiently perform various tasks and cope well in difficult situations.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.

c) A is true but R is false.
d) A is false but R is true.

25. **Assertion (A):** Spending time with family and friends is important for mental well-being. **[1]**
Reason (R): Social interactions provide emotional support and improve mood.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

26. **Assertion (A):** Eating fast food and other junk food every day is harmful for our health. **[1]**
Reason (R): Junk food contains high levels of unhealthy fats and sugars which can lead to obesity and other health issues.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

27. **Assertion (A):** Health is more than just not having diseases, it includes physical, mental, and social well-being. **[1]**
Reason (R): The World Health Organization (WHO) defines health as not merely the absence of disease.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

28. **Assertion (A):** A balanced diet supports a healthy body by providing essential nutrients. **[1]**
Reason (R): Fruits, vegetables, and whole grains are rich sources of vitamins, minerals, and fibers.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

29. **Assertion (A):** Personal hygiene is important to stay healthy. **[1]**
Reason (R): Maintaining hygiene reduces the risk of infections and illnesses.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

30. **Assertion (A):** Smallpox and polio are rarely seen today. **[1]**
Reason (R): This is due to widespread vaccination programs.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

Section D

31. Match the following: **[2]**

Column A	Column B

1. Typhoid	(a) Virus (Influenza)
2. Dengue	(b) Bacteria (Salmonella typhi)
3. Flu	(c) Virus (Varicella-zoster)
4. Chickenpox	(d) Virus (transmitted by mosquito)

32. Match the following: **[2]**

Column A	Column B
1. Vaccination	(a) Dengue
2. Removing Standing Water	(b) Polio
3. Washing Hands	(c) Typhoid
4. Wearing Masks	(d) COVID-19

Section E

33. Who discovered the first vaccine and for which disease? **[1]**
34. Explain the importance of a positive attitude in staying healthy. **[1]**
35. How does climate change lead to the emergence of new diseases? **[1]**
36. What are the components of a balanced diet? **[1]**
37. What are pathogens? **[1]**
38. What are the health effects of poor air quality? **[1]**
39. What does a tetanus shot contain? **[1]**
40. What is the definition of health according to the World Health Organization (WHO)? **[2]**
41. How does your body respond to an infection such as common cold? **[2]**
42. How does the holistic approach of Ayurveda differ from conventional medicine in promoting health? **[2]**
43. Why are vaccines considered preventive measures rather than treatments for diseases? **[2]**
44. Describe the main purpose of a vaccine and explain how it helps in preventing diseases in humans. **[2]**
45. List two factors that contributed to the discovery of penicillin and its significance in modern medicine. **[2]**
46. Evaluate the potential challenges and benefits of traditional medicine systems in managing modern diseases. **[3]**
47. Describe how maintaining a balance between body, mind, and surroundings can impact a person's health. **[3]**
48. List some traditional practices suggested by Ayurveda to support overall well-being. **[3]**
49. How do emotions like stress or worry affect us and make us sick? **[3]**
50. Define "health" in terms of physical, mental, and social well-being according to the World Health Organization. **[3]**
51. Answer the following: **[5]**
    i. Explain the traditional Indian method of variolation used to prevent smallpox.
    ii. What were the people who performed variolation called?
    iii. Differentiate between variolation and vaccination based on how immunity was developed.

52. Identify and outline the roles social and emotional factors play in maintaining good mental health. **[5]**

53. Answer the following: **[5]**

i. Explain why health is considered more than the absence of disease.

ii. State one ability of a healthy person.

iii. Analyze how Ayurvedic practices support overall well-being.

54. Describe how communicable diseases can spread through different mediums, using specific examples. **[5]**

55. Answer the following: **[5]**

i. Describe the main practices that help maintain a healthy lifestyle.

ii. What do healthy habits support?

iii. Explain why both lifestyle and environment are important for health.

Section F

56. **Read the following text carefully and answer the questions that follow:** **[4]**

Our body generally functions in a balanced way to keep us healthy. When we feel unwell, it means something inside is not working properly. We may notice symptoms, such as pain, tiredness, or dizziness, and signs like fever, rash, or swelling. A symptom is what we feel, while a sign can be observed or measured. Doctors use these symptoms and signs to identify what is making us unwell.

Questions:

a. Give one example of a sign of illness. How is it different from a symptom? **(1)**

b. Differentiate between symptoms and signs of illness with one example each. **(1)**

c. Why do doctors need both symptoms and signs to diagnose an illness? **(2)**

OR

Explain with examples how symptoms and signs together give a clearer picture of being unwell. **(2)**

VLM

57. The following table contains information about the number of dengue cases reported in a hospital over a period of one year: **[4]**

S. No.	1	2	3	4	5	6
Month	January	February	March	April	May	June
No. of dengue cases	10	12	15	18	22	40

S. No.	7	8	9	10	11	12
No. of dengue cases	65	65	65	30	30	20

Make a bar graph of the number of cases on the Y-axis and the month on the X-axis. Critically analyse your findings and answer the following:

i. In which three months were the dengue cases highest?

ii. In which month(s) were the cases lowest?

iii. What natural or environmental factors during the peak months might contribute to the increase in dengue cases?

iv. Suggest a few preventive steps that the community or government can take before the peak season to reduce the spread of dengue.

VLM
