CHAPTER-11-QUESTIONS-CLASS6TH-SCIENCE

Class 06 - Science (Curiosity)

Section A

1. What is the main source of energy on Earth? **[1]**

   a) Sun
   b) Electricity
   c) Wind
   d) Water

2. What are resources that do not replenish in a reasonable timeframe called? **[1]**

   a) Permanent resources
   b) Renewable resources
   c) Non-renewable resources
   d) Temporary resources

3. Which rock is used for roofing? **[1]**

   a) Marble
   b) Granite
   c) Sandstone
   d) Slate

4. An example of fossil fuel is **[1]**

   a) coal
   b) wood
   c) plastic
   d) paper

5. In which form is natural gas used as a vehicle fuel? **[1]**

   a) As Gasoline
   b) Compressed Natural Gas (CNG)
   c) In Solid form
   d) As Kerosene

6. Which of these is an example of a non-renewable resource? **[1]**

   a) Fossil fuels
   b) Solar energy
   c) Rainwater
   d) Wind

7. How do solar panels benefit households? **[1]**

   a) They increase air pollution levels.
   b) They provide internet service.
   c) They cool the house during hot days.
   d) They produce clean renewable energy.

8. What is a common use of solar energy in daily life? **[1]**

   a) Heating water
   b) Spinning a wind turbine
   c) Producing coal energy
   d) Running a diesel generator

9. Which gas is produced, when coal burns in air? **[1]**

   a) Hydrogen
   b) Nitrogen
   c) Carbon dioxide
   d) Oxygen

10. Which resource is essential for growing vegetables? **[1]**

a) Sunlight
b) Wind
c) Water
d) Air

11. Why should natural resources be used judiciously? **[1]**

a) They are all unlimited in quantity.
b) All types are dangerous for the environment.
c) To ensure they remain available for future generations.
d) They can be easily replaced.

12. Which activity can pollute freshwater sources? **[1]**

a) Collecting rainwater
b) Fixing leaking taps
c) Dumping household waste
d) Recycling used water

13. What is a natural resource that provides us with heat and light? **[1]**

a) Coal
b) Wind
c) Soil
d) Sun

14. How does nature help in renewing some resources? **[1]**

a) Through natural processes such as rain and photosynthesis
b) By human intervention only
c) Through recycling plants
d) Immediate replenishment once used

15. Which domestic fuel has replaced coal and wood due to less pollution? **[1]**

a) Kerosene
b) Compressed Natural Gas (CNG)
c) Liquefied Petroleum Gas (LPG)
d) Diesel

16. What is not true about air? **[1]**

a) Birds can fly due to presence of air.
b) It helps in the movements of aeroplanes.
c) It makes the windmill rotate.
d) It has no role in water cycle.

17. Which of the following is not considered a natural resource? **[1]**

a) Soil
b) Water
c) Air
d) Electricity

18. **Assertion (A):** Fossil fuels are considered exhaustible natural resources. **[1]**
Reason (R): They can be renewed quickly through artificial methods.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

19. **Assertion (A):** Excessive use of fossil fuels is harmful. **[1]**
Reason (R): It increases air pollution and leads to climate change.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

20. **Assertion (A):** Water harvesting is crucial in regions with scarce water resources. **[1]**
Reason (R): Stepwells are an ancient method used to collect rainwater and prevent evaporation.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

21. **Assertion (A):** Animals on Earth completely depend on the Sun for energy. **[1]**
Reason (R): Photosynthesis, the process through which plants create food, requires sunlight as a key component.

a) Both A and R are true, and R is the correct explanation of A.
b) Both A and R are true, but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

22. **Assertion (A):** Solar cookers use the Sun's energy to cook food. **[1]**
Reason (R): The Earth's atmosphere allows for consistent sunlight all day long.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

23. **Assertion (A):** Natural resources such as air, water, soil, and food must be conserved for future generations. **[1]**
Reason (R): Nature provides these resources in unlimited quantities, so conservation is unnecessary.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

24. **Assertion (A):** The Sun plays a vital role in Earth's water cycle. **[1]**
Reason (R): The Sun's heat causes evaporation of water, forming clouds and leading to precipitation.

a) Both A and R are true, and R is the correct explanation of A.
b) Both A and R are true, but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

25. **Assertion (A):** Human-made resources are entirely independent of natural resources. **[1]**
Reason (R): Human beings create artificial resources without relying on natural materials.

a) Both A and R are true and R is the
b) Both A and R are true but R is not

correct explanation of A.

b) Both A and R are true but R is not the correct explanation of A.

c) A is true but R is false.

d) A is false but R is true.

26. **Assertion (A):** The Chipko movement started in Uttarakhand in the early 1970s to protect trees from being felled. **[1]**

Reason (R): The roots of plants hold on to the soil and prevent it from being washed away.

a) Both A and R are true and R is the correct explanation of A.

b) Both A and R are true but R is not the correct explanation of A.

c) A is true but R is false.

d) A is false but R is true.

27. How does the use of solar panels contribute to energy production? **[1]**

28. How does the drying of chillies using sunlight illustrate the practical use of solar energy in daily life? **[1]**

29. What role do the spaces between soil particles play in plant growth in a garden? **[1]**

30. Explain why the Sun is acknowledged as the principal source of energy in traditional Indian morning rituals. **[1]**

31. Why are forests considered natural homes for a variety of wild animals? **[1]**

32. Why should one wash hands after handling soil with potential garbage content? **[1]**

33. In what ways are minerals crucial for modern technology manufacturing? **[1]**

Section B

34. Match the following: **[2]**

Column A	Column B
(a) Petroleum	(i) Used in agriculture and daily life
(b) Wind energy	(ii) Non-renewable resource
(c) Minerals	(iii) Used to generate electricity
(d) Water	(iv) Found deep inside the Earth

35. Match the following: **[2]**

Column (A)	Column (B)
(a) Air	(i) Renewable Resource
(b) Fossil Fuels	(ii) Non-renewable Resource
(c) Solar Energy	(iii) Renewable Resource
(d) Water	(iv) Renewable Resource

36. Evaluate the role of technology in ensuring the sustainable use of natural resources like forests and water. **[2]**

37. Discuss the historical efforts made in India to conserve forests, highlighting key movements and traditions. **[2]**

38. Propose a community program to promote solar energy use in urban environments. **[2]**

39. Evaluate the impact of industrial waste on freshwater sources. **[2]**

40. What would happen if we continue using fossil fuels at the current rate? Propose a **[2]**

future scenario.

41. Analyze the physical process and outcome of making a firki (paper pinwheel) and its significance as an educational tool. **[2]**

42. What role do fallen leaves play in the forest ecosystem, and why are they important for soil health? **[2]**

Section C

43. In what ways do windmills utilize air to produce energy, and why are windmill farms significant for sustainable development? **[3]**

44. Why is water considered a renewable resource while petroleum is considered a non-renewable resource? **[3]**

45. What connection can be drawn between traditional practices like offering water to the Sun and its importance as an energy source? **[3]**

46. Discuss the potential health hazards of handling soil from different locations and the precautionary measures to take. **[3]**

47. Evaluate the processes by which rocks are formed and the importance of their conservation. **[3]**

48. Evaluate the traditional stepwell system's effectiveness in water conservation compared to modern methods. **[3]**

49. Discuss the long-term consequences of continued forest cover reduction. **[3]**

Section D

50. **Read the following text carefully and answer the questions that follow:** **[4]**

Forests are a natural home for many wild animals, including birds and insects. Forests provide food and shelter to them. In nature, every animal depends on other life forms for survival. The diversity of life forms ensures food for every living being. However, over the years, the forest cover has been decreasing, mainly due to human activities like large scale cutting of trees. It takes many years to grow a new forest or restore lost forests. Therefore, we must preserve and use forests responsibly so that they get enough time to regenerate.

a. Why are forests important for wild animals? (1)

b. What is one major human activity that leads to the decrease in forest cover? (1)

c. Explain how the diversity of life forms in forests ensures the survival of living beings. (2)

OR

Why is it important to preserve forests, and how can we use them responsibly? (2)

51. **Read the following text carefully and answer the questions that follow:** **[4]**

Nature’s treasures fulfill our needs. They are essential resources to sustain all life forms on the Earth. For example, we get heat and light from the Sun, water from rivers, and food from plants and animals. These resources which we get from nature are called natural resources. We also use natural resources to make many useful things for our convenience. For example, electric bulbs, furniture, solar panels, bicycles, etc., make our lives comfortable. All such resources created by human beings are called human-made resources. You have learnt about various natural resources,

such as air, water, energy from the Sun, forests, soil, rocks, minerals and fossil fuels. Some of these natural resources get replenished through natural processes over a period of time. If you remember, Ajji told Bhoomi and Surya that they could collect only those nellikai that had fallen on the ground. This makes sure that there would be enough fruits for other animals and birds. The seeds from the droppings of animals and birds would enable new trees to grow, though it would take some years before we get fruits from these new trees. Thus, resources which get renewed, replenished or restored within a reasonable period of time are called renewable resources. Air, water and forest are some of the examples of renewable natural resources. Nature renews them. We should use our natural resources judiciously. On the other hand, fossil fuels take millions of years to form. They are found in limited quantities and once used, they get exhausted. They are not produced or replenished within a reasonable period of time. These resources are called non-renewable resources. Examples of non-renewable natural resources are minerals, soil, rocks, coal, petroleum and natural gas.

Questions:

a. What are natural resources? Provide two examples from the passage. **(1)**

b. Why did Ajji tell Bhoomi and Surya to collect only the nellikai that had fallen on the ground? **(1)**

c. Explain the difference between renewable and non-renewable resources, and provide two examples of each. **(2)**

OR

Why should we use natural resources judiciously? **(2)**

52. **Read the following text carefully and answer the questions that follow:** **[4]**

There are many ways to reduce wastage of water. For example, turning off taps when not in use and fixing water leakages. Recycling water and water harvesting also help in saving water. Our country is blessed with numerous rivers, streams and lakes. We pollute freshwater sources by throwing trash (waste materials) in them. Waste from homes and industries pollute our water sources when it is dumped into them. Identify other human activities that lead to water pollution. Discuss with your friends in the class what you can do to reduce water pollution. Polluted water is not fit for consumption by living beings. As freshwater sources are limited, there is a shortage of water in many parts of India. At some places, people have to walk long distances to fetch drinking water. Everyone does not have the same kind of access to water. It is important for us to conserve water and use it judiciously. We must also prevent it from being polluted so that water remains fit for consumption by all living beings.

Questions:

a. What are two methods mentioned for conserving water? **(1)**

b. How does polluting water sources affect living beings? **(1)**

c. Discuss why it is essential to use water judiciously, especially in areas with water scarcity. **(2)**

Or

Explain how human activities contribute to water pollution and suggest ways to prevent it. **(2)**

Section E

53. Differentiate between conserving freshwater and preventing water pollution. Explain why both measures are necessary. **[5]**

54. How can traditional knowledge and modern conservation strategies complement each other to preserve forests effectively? Give examples from the text to support your argument. **[5]**

55. Illustrate the importance of conserving rocks and minerals, considering the time required for their natural formation. **[5]**

56. Describe the different natural resources mentioned in the chapter. How do they support life on Earth? **[5]**

57. Explain how offering water to the Sun as a cultural practice signifies its importance to life on Earth. **[5]**

58. Justify why fossil fuels should be used wisely. What are some alternative energy sources? **[5]**

59. Why should dependence on fossil fuels be reduced? Explain the role of cleaner alternatives. **[5]**

Section F

60. **State whether the given statement is True or False:** **[8]**

    (a) Arrow heads is not a rock tool. **[1]**

    (b) In ancient times, India had a tradition of respecting, protecting and preserving forests. **[1]**

    (c) Natural resources can be divided into renewable and non-renewable resources. **[1]**

    (d) Compressed Natural Gas (CNG) is a cleaner fuel compared to petrol and diesel. **[1]**

    (e) Energy from the Sun can be used for cooking using a solar heater. **[1]**

    (f) Saline water from oceans and seas is directly usable for agriculture without any treatment. **[1]**

    (g) The air which surrounds the Earth is a mixture of gases. **[1]**

    (h) Vehicles powered by fossil fuels do not cause any pollution. **[1]**

61. **Fill in the blanks:** **[8]**

    (a) Air, water, and forest are examples of _____ natural resources. **[1]**

    (b) Saline water is not fit for domestic, agricultural and _____ use. **[1]**

    (c) Water covers about _____ of the Earth's surface. **[1]**

    (d) The _____ is the main source of energy on Earth. **[1]**

    (e) The resources created by human beings such as electric bulbs and furniture are called _____. **[1]**

    (f) The firki rotates due to the force of _____. **[1]**

    (g) Petrol and diesel are obtained from _____. **[1]**

(h) Electric vehicles are designed to cause less _____. **[1]**
