CHAPTER-6-QUESTIONS-CLASS7TH-SCIENCE

Class 07 - Science (Curiosity)

Section A

1. Which condition commonly causes small reddish pimples during adolescence? **[1]**

   a) Hair growth
   b) Skin dryness
   c) Acne condition
   d) Voice change

2. What is the phase involving blood discharge called? **[1]**

   a) Reproduction
   b) Maturation
   c) Menstruation
   d) Adolescence

3. Which of the following is a primary sexual characteristic? **[1]**

   a) Development of breasts
   b) Deepening of voice
   c) Presence of ovaries
   d) Growth of pubic hair

4. Menstruation typically occurs: **[1]**

   a) Twice in a month
   b) Every week
   c) Once in a year
   d) Once in a month

5. What is the menstrual cycle commonly known as? **[1]**

   a) The reproductive phase
   b) The growth phase
   c) The period
   d) The maturity phase

6. What is adolescence? **[1]**

   a) Period after complete adulthood
   b) Period from childhood to adulthood
   c) Period before early childhood
   d) Period limited to infancy

7. The voice box is also known as: **[1]**

   a) Esophagus
   b) Larynx
   c) Trachea
   d) Pharynx

8. Which of the following is a secondary sexual characteristic in boys? **[1]**

   a) Broadening of shoulders
   b) Development of breasts
   c) Development of ovaries
   d) Development of the uterus

9. Which of the following is not a change seen during adolescence? **[1]**

   a) Increase in height
   b) Growth of hair in armpits
   c) Development of reproductive
   d) Formation of bones

organs

10. Why can seeking guidance from elders help adolescents use social media positively? **[1]**

a) It removes the need for caution
b) It increases online entertainment time
c) It supports responsible platform use
d) It encourages sharing private information

11. The most conspicuous visible change that occurs in boys during puberty is: **[1]**

a) increased sweating.
b) production of sperm
c) development in the voice box
d) increase in height

12. Which state follows the Shuchi Scheme? **[1]**

a) Odisha
b) West Bengal
c) Jharkhand
d) Karnataka

13. Which hormone is responsible for the development of secondary sexual characteristics in males? **[1]**

a) Progesterone
b) Testosterone
c) Insulin
d) Estrogen

14. Which of the following glands is associated with the 'fight or flight' response? **[1]**

a) Thyroid
b) Pituitary
c) Pancreas
d) Adrenal

15. What does the onset of menstruation indicate during adolescence? **[1]**

a) A reproductive capability change
b) Completion of adolescent growth
c) Beginning of physical ageing
d) End of emotional development

16. What is the regular or harmful use of substances such as tobacco, alcohol, or drugs called? **[1]**

a) Physical activity
b) Personal hygiene
c) Social interaction
d) Substance abuse

17. Adolescence generally begins around the age of: **[1]**

a) 20 years
b) 15 years
c) 10 years
d) 5 years

18. Which nutrient is needed for proper growth during adolescence? **[1]**

a) Vitamins and minerals
b) Iron and calcium
c) Water and fibre
d) Proteins and carbohydrates

19. What are hormones? **[1]**

a) Chemicals produced in bodies
b) Nutrients obtained from foods
c) Gases released during breathing
d) Minerals stored inside bones

20. Acne and pimples are common during adolescence due to: **[1]**

a) increased activity of salivary glands
b) increase in oily secretions from skin
c) increased activity of tear glands.
d) increased activity of sweat glands

21. **Assertion (A):** Estrogen is responsible for the development of male secondary sexual characteristics. **[1]**
Reason (R): Estrogen is produced in the testes.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) Both A and R are false.

22. **Assertion (A):** The adrenal gland produces insulin. **[1]**
Reason (R): Insulin regulates blood sugar levels.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

23. **Assertion (A):** Puberty ends when an adolescent reaches reproductive maturity. **[1]**
Reason (R): The period of adolescence varies from person to person.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

24. **Assertion (A):** Hormones are chemicals produced in our body. **[1]**
Reason (R): Hormones influence the mood and behaviour of adolescents.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

25. **Assertion (A):** During menstruation, blood is discharged from the body as part of the cycle. **[1]**
Reason (R): Menstruation lasts for eight to fifteen days.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

26. **Assertion (A):** Menarche marks the beginning of the reproductive phase in females. **[1]**
Reason (R): Menarche is the first occurrence of menstruation.

a) Both A and R are true and R is the correct explanation of A.
b) Both A and R are true but R is not the correct explanation of A.
c) A is true but R is false.
d) A is false but R is true.

27. **Assertion (A):** The larynx enlarges during puberty in boys, leading to a deeper voice. **[1]**
Reason (R): The enlargement of the larynx is a secondary sexual characteristic in

males.

a) Both A and R are true and R is the correct explanation of A.

b) Both A and R are true but R is not the correct explanation of A.

c) A is true but R is false.

d) A is false but R is true.

28. What becomes more prominent during adolescence as part of continuous growth and development? **[1]**

29. What is the function of the thyroid gland? **[1]**

30. What is menarche? **[1]**

31. Do girls also have Adam's apple? **[1]**

32. Which deficiency may cause blood-related health problems in adolescents, especially girls? **[1]**

33. What is the menstrual cycle, and what range can its duration have in healthy girls? **[1]**

34. Do boys also have menstrual cycle? **[1]**

Section B

35. Match the following: **[2]**

Column A	Column B
(a) Balanced diet	(i) Builds trust and emotional support
(b) Physical activity	(ii) Provides energy for growth
(c) Sharing feelings	(iii) Helps reduce emotional stress
(d) Talking to trusted adults	(iv) Releases positive hormones

36. Match the following: **[2]**

Column A	Column B
(a) Adolescence	(i) Sudden increase in body size
(b) Growth spurt	(ii) Physical changes due to hormones
(c) Height and weight changes	(iii) Visible signs of development
(d) Puberty	(iv) Stage between childhood and adulthood

37. Describe the relationship between menstruation and reproductive health. **[2]**

38. How can menstrual hygiene be promoted at home and in society? **[2]**

39. Explain the role of hormones during adolescence. **[2]**

40. Differentiate the Menstrual Hygiene Scheme and Suvidha Sanitary Napkin Initiative. **[2]**

41. Explain how myths about menstruation can affect girls and women. **[2]**

42. How does the voice change during adolescence? **[2]**

43. What is the function of the adrenal gland? **[2]**

Section C

44. Explain the importance of sex education during adolescence. **[3]**

45. Differentiate the changes in voice experienced by adolescent boys and girls. **[3]**

46. Explain how adolescents can respond when peers pressure them to consume harmful substances. **[3]**

47. Apply the idea of normal variation to differences in hair growth among adolescents. **[3]**

48. Discuss the importance of balanced diet during adolescence. **[3]**

49. Describe the role of the endocrine system in adolescence. **[3]**

50. How do hormones influence growth during adolescence? **[3]**

Section D

51. **Read the following text carefully and answer the questions that follow:** **[4]**

Adolescence is marked not only by observable changes but also by internal changes that are not visible from the outside. One such change is the maturation of various parts involved in the process of reproduction. Both boys and girls experience such changes gradually, and these changes are a natural part of the process of growing up. An important internal change associated with adolescent girls is the onset of the menstrual cycle. It recurs generally every 28-30 days and is more commonly known as 'the period'. Many healthy girls may have longer or shorter menstrual cycles ranging from 21-35 days. The menstrual cycle is an important natural process and is one of the signs of good reproductive health. The phase of the cycle when blood discharge occurs from the body is referred to as menstruation. It may last for three to seven days. Some girls may feel pain or discomfort in the lower abdomen during these days. Usually, by the age of 45-55, menstruation stops naturally, marking the end of the reproductive capability in a woman's life.

Questions:

a. What is the menstrual cycle, and why is it important for reproductive health? (1)

b. How long does a typical menstrual cycle last, and what variations might occur? (1)

c. At what age does menstruation typically stop in women, and what does this indicate? (2)

OR

What changes occur in adolescent girls that signify the onset of reproductive capability? (2)

52. **Read the following text carefully and answer the questions that follow:** **[4]**

Some people, including your peers, may tempt, persuade, force or, create pressure on you to consume harmful substances such as tobacco, gutka, cigarettes, beedi, alcohol, or even life-threatening illegal drugs. Since adolescence is marked by curiosity and excitement, adolescents might get influenced by such people and try these substances. These substances are not just harmful to physical and mental health but are also addictive. This means that once people start consuming them, they develop a strong urge to take them again and again. Over time, they start using them regularly. This is called substance abuse. Using these substances can cause serious health problems, such as breathing difficulties, memory loss, and damage to the lungs, depending on the substance. To stay healthy, it is important to completely avoid these substances and make healthy choices instead. The first step to overcoming addiction is seeking help and support from family and friends, and talking to trusted people, such as parents or teachers. Counselling and medical advice can also be helpful in handling such situations.

Questions:

a. Why are adolescents particularly vulnerable to trying harmful substances like tobacco and alcohol? (1)

b. What is substance abuse, and what are its potential consequences on health? (1)

c. How can an adolescent avoid getting involved with harmful substances? (2)

OR

What steps can a person take to overcome addiction to harmful substances? (2)

53. **Read the following text carefully and answer the questions that follow:** **[4]**

Personal hygiene is also crucially important during adolescence. Maintaining body hygiene, particularly in the armpits and the pubic region, may protect us from potential infections. For girls, maintaining proper hygiene during menstruation is essential for both comfort and health. Menstrual hygiene can be maintained using items such as sanitary pads and reusable cloth pads designed for this purpose. The government also attempts to provide these products free of charge or at a low price to improve the menstrual hygiene of girls and women. As a society, we should all make efforts to ensure the availability of necessary facilities in schools and public places to promote menstrual hygiene. Collectively, we should move forward, reducing any stigma around sanitary pads and helping in menstrual hygiene. It is important to dispose of used sanitary pads properly by wrapping them in newspaper and disposing inside a dustbin. This is to ensure community health and environmental cleanliness. These days, biodegradable sanitary pads are also available that are environment-friendly.

Questions:

a. Why is personal hygiene particularly important during adolescence? (1)

b. How can menstrual hygiene be maintained, and why is it essential? (1)

c. What steps should be taken to dispose of used sanitary pads properly? (2)

OR

How do biodegradable sanitary pads help in promoting environmental cleanliness? (2)

Section E

54. Evaluate how different healthy habits described for adolescence contribute to overall well-being. **[5]**

55. Evaluate responsible behaviour that can help adolescents stay safer while using online platforms. **[5]**

56. Analyze the importance of government initiatives in supporting menstrual hygiene. **[5]**

57. Discuss the various physical changes that occur during adolescence in both boys and girls. **[5]**

58. Evaluate the importance of encouraging a scientific outlook towards menstruation. **[5]**

59. Why should physical changes during adolescence not be expected to occur identically in every individual? **[5]**

Section F

60. **State whether the given statement is True or False:** **[8]**

(a) The voice of boys becomes shriller during adolescence. **[1]**

(b) Only boys experience growth spurts during adolescence. **[1]**

(c) Adam's apple is found in girls only. **[1]**

(d) Mood swings are uncommon during adolescence. **[1]**

(e) Emotional changes during adolescence are uncommon and should be ignored. **[1]**

(f) Hormones play a major role in the physical and emotional changes during adolescence. **[1]**

(g) Adolescents should maintain personal hygiene to prevent skin issues like acne. **[1]**

(h) Adolescence begins and ends at the same age for everyone. **[1]**

61. **Fill in the blanks:** **[8]**

(a) The hormone responsible for male secondary sexual characteristics is _____. **[1]**

(b) The changes which occur during adolescence are controlled by _____. **[1]**

(c) The time of puberty in girls are marked by the beginning of _____. **[1]**

(d) The period of adolescence generally begins around the age of _____. **[1]**

(e) The onset of menstruation is called _____. **[1]**

(f) In girls, the ovaries release an egg every month in a process called _____. **[1]**

(g) The process of releasing a mature egg from the ovary is known as _____. **[1]**

(h) The voice box in boys grows larger during adolescence and is called the _____. **[1]**
